**Pregnancy Categories**

- A OK
- B Adequate studies in pregnant women have not demonstrated a risk to the fetus during the first trimester of pregnancy & there is no evidence of risk in later trimesters.
- C Animal studies have shown an adverse effect on the fetus, but there are no adequate studies in humans. Benefits of the drug in pregnant women may be acceptable despite the potential risk.
- D There is evidence of human fetal risk, but the potential benefits from the use of the drug in pregnant women may be acceptable despite it's potential risk.
- X DO NOT USE! Studies in humans demonstrate fetal abnormalities or adverse reaction reports indicate evidence of fetal risk. The risk of use in pregnant women clearly outweighs any possible benefit.
